TYND-BYZED

## Debris Marine

Any manmade object discarded, disposed or abandoned that enters the coastal or marine environment.

## DON'T GO WITH THE FLOW

All marine debris comes from people:

- Surprisingly, a vast amount of marine debris comes from land-based sources through wind and water transport.
- Marine litter is found in all the oceans of the world and is one of the largest growing pollution problems today.
- Research suggests that most plastics, such as plastic beverage bottles and plastic bags, do not degrade completely.
